

Unit 0: Course Launch, Procedures, and FabLab Foundations

Quiz 0A: Procedures, Notebooks, and Digital Workflow

Name: _____ Period: _____

Date: _____ Score: _____

Instructions

Answer each question independently. Choose the best answer for multiple choice, complete the matching section, and respond to short-response prompts in complete sentences.

Score:

/ 25

Part A: Multiple Choice

- Why are clear procedures especially important in an engineering classroom?
 - They make the room look more formal
 - They allow students to avoid documentation
 - They support safety, shared equipment use, and efficient teamwork
 - They replace teacher directions
- Which item belongs in an engineering notebook?
 - Only final answers
 - Sketches, data, decisions, failures, and reflections
 - Only printed worksheets
 - Only graded assignments
- What is the best reason to use a consistent file naming system?
 - It makes file names longer
 - It helps files look technical
 - It helps teams find, track, and submit the correct version
 - It removes the need to save files
- What does version control help students track?
 - Room seating
 - Changes between file versions
 - The number of pencils used
 - Grades from other classes
- Which behavior best shows engineering professionalism?
 - Waiting for others to clean
 - Documenting work and resetting the workspace
 - Using tools before instructions
 - Ignoring small problems
- What should a student do when absent?
 - Ignore missed work
 - Ask a teammate to finish everything
 - Follow the class absence procedure and check missing assignments
 - Use tools during lunch without permission
- Which file name best follows the recommended format?
 - assignmentfinalreallyfinal
 - 3.Smith_Unit0Reflection_V1
 - Smith's thing
 - period three reflection done

8. What is the main purpose of Unit 0?

- A. To skip design work
- B. To prepare students for safe, professional engineering work
- C. To replace all later projects
- D. To grade students harshly immediately

Part B: Vocabulary / Matching

Write the letter of the best matching term in the blank.

- | | |
|-----------------------------------|---|
| _____ Engineering notebook | A. A record of sketches, notes, decisions, data, failures, and reflections. |
| _____ Version control | B. Saving and organizing files so the correct version can be found and submitted. |
| _____ Professionalism | C. The habit of acting prepared, safe, respectful, and responsible. |
| _____ Digital workflow | D. A process for naming, saving, organizing, and submitting digital files. |
| _____ Workspace reset | E. Returning an area to a clean, organized, ready-to-use condition. |

Part C: Short Response

1. Explain why engineering notebooks should include mistakes and redesigns, not only final answers.

2. Describe one classroom procedure that will help the FabLab run safely.

Unit 0: Course Launch, Procedures, and FabLab Foundations

Quiz 0B: FabLab Safety, PPE, and Emergency Procedures

Name: _____ Period: _____

Date: _____ Score: _____

Instructions

Answer each question independently. Choose the best answer for multiple choice, complete the matching section, and respond to short-response prompts in complete sentences.

Score:

/ 25

Part A: Multiple Choice

- What does PPE stand for?
A. Personal Project Equipment
B. Personal Protective Equipment
C. Printed Part Example
D. Professional Prototype Evaluation
- What should a student do if a tool appears damaged?
A. Try to fix it
B. Keep using it carefully
C. Tell the teacher immediately
D. Put it away quietly
- Which action best demonstrates safety culture?
A. Following rules only when watched
B. Making safe choices even when no one is watching
C. Ignoring hazards if they are small
D. Letting classmates decide all safety rules
- When should safety glasses be worn?
A. Only for pictures
B. When required by the task or teacher
C. Only if the student wants to
D. Never indoors
- What should happen if a machine smells like burning or sparks?
A. Keep working faster
B. Stop, step away if needed, and notify the teacher
C. Ask a friend to fix it
D. Unplug random equipment
- Why is rushing dangerous in a FabLab?
A. It makes the room quiet
B. It improves productivity
C. It increases mistakes and unsafe decisions
D. It is required before the bell
- Which item is an unsafe FabLab behavior?
A. Reporting injuries
B. Wearing required PPE
C. Horseplay near tools
D. Asking questions

8. Why should loose clothing, jewelry, or long hair be secured?
- A. To improve grades
 - B. To prevent it from getting caught in moving parts
 - C. To save materials
 - D. To make sketches neater

Part B: Vocabulary / Matching

Write the letter of the best matching term in the blank.

- | | |
|--------------------------------------|---|
| _____ PPE | A. Equipment worn to protect a person from injury. |
| _____ Emergency stop/response | B. The process of stopping work and notifying the teacher during unsafe conditions. |
| _____ Safety culture | C. Making safe choices consistently, even without reminders. |
| _____ Hazard | D. A condition that could cause injury or damage. |
| _____ Material approval | E. Teacher confirmation that a material is safe and appropriate for a tool. |

Part C: Short Response

1. Describe the correct response if you see smoke, sparks, or smell burning near a machine.

2. Explain why reporting a broken tool protects more than just the person who noticed it.

Unit 0: Course Launch, Procedures, and FabLab Foundations

Quiz 0C: Tool Certification, Cleanup, and Workspace Reset

Name: _____ Period: _____

Date: _____ Score: _____

Instructions

Answer each question independently. Choose the best answer for multiple choice, complete the matching section, and respond to short-response prompts in complete sentences.

Score:

/ 25

Part A: Multiple Choice

- What does tool certification prove?
 - A student owns the tool
 - A student has demonstrated basic safe use knowledge for a tool or process
 - A student can use the tool anytime
 - A student does not need teacher supervision
- What is still required even after certification?
 - Teacher permission for tool use at that time
 - No PPE
 - Skipping cleanup
 - Using any material
- Which certification should come before any FabLab work?
 - CNC advanced
 - General FabLab safety
 - Laser engraving
 - Final project defense
- What does it mean to reset a workspace?
 - Push materials aside
 - Return it to a clean, organized, ready-to-use condition
 - Leave when the bell rings
 - Put tools wherever they fit
- Why is cleanup a safety issue?
 - It only affects appearance
 - It prevents tripping hazards, lost tools, and damaged equipment
 - It replaces PPE
 - It is optional after quizzes
- Which action should happen before using a new material in a machine?
 - Guess if it is safe
 - Get approval
 - Hide the label
 - Test it without asking
- What may happen after unsafe behavior?
 - Automatic extra credit
 - Loss of FabLab privileges
 - Free tool access
 - No consequences

8. Which is the best cleanup habit?

- A. Leave scrap for the next class
- C. Put tools in backpacks

- B. Return tools, store materials, and clear the floor
- D. Wait for another team

Part B: Vocabulary / Matching

Write the letter of the best matching term in the blank.

_____ **Certification**

A. A documented check that a student has been trained for a tool or process.

_____ **Permission**

B. Teacher approval to use a tool at a specific time.

_____ **Workspace reset**

C. Returning a work area to a safe, organized condition.

_____ **Scrap**

D. Leftover material that must be stored or discarded correctly.

_____ **Restricted tool**

E. A tool that requires extra training, certification, or direct supervision.

Part C: Short Response

1. Explain the difference between being certified and having permission.

2. Describe a complete workspace reset after a simple prototyping activity.
